

Job type: Technology Consultant

Contact: recruitment@korteq.com

Method of application: CV & Covering letter

Deadline: On-going

Technology Consultant

Are you looking for a role where you will combine your passion for technology with your innovative and outgoing personality? KorteQ is looking to recruit an entry level consultant with a strong IT background and a hunger to learn, for our dynamic and growing team.

The Company

KorteQ is a specialist management consultancy. We work with our clients to accelerate learning, reduce risk and improve performance through *effective knowledge transfer*. The effective use of the latest Web 2.0 collaborative technologies plays a key role in implementing many of our solutions and is an ever-growing aspect of the business, as we build intelligent processes and information-rich ways of working for our clients.

The Role

A consultant in the Technology Service Line (TSL) will be involved at every stage of client projects, providing a full life-cycle service from discovering client needs and developing winning concepts right through to delivery of first-class solutions.

Projects in technology services typically involve:

- proactively eliciting, suggesting, analysing and prioritising requirements
- creating and proposing innovative solutions
- creating demonstrator concepts for clients
- designing and developing the agreed solution according to industry best practice
- managing post-implementation disciplines in order to ensure that the target business case is achieved

As an entry-level candidate, you will initially focus on the technical aspects of the work and, with the support of focused training, develop the further skills you require.

The Candidate

Successful candidates will typically have an IT-related degree (2:1 minimum), and a genuine interest in developing advanced technology-driven solutions to commercial problems. Outgoing and personable, you must be able to succeed in a client-facing role.

Understanding of leading-edge concepts such as software-as-a-service, Web 2.0, user-generated content and virtual team collaboration coupled with experience of products such as MS SharePoint, GoogleApps and Salesforce.com would be highly advantageous. The key requirements are enthusiasm and a track record of developing IT solutions in either an extra-curricular or business /study based environment.

If you feel that this is the right opportunity for you, tell us why by emailing your CV with a covering letter to recruitment@korteq.com
